Contents of Volume 24, 1985

Number One

Standardized graphics on the IBM Personal Computer 3
T. B. Clarkson III

A professional graphics controller 14
K. A. Duke and W. A. Wall

Expanded personal computing power and capability 26
P. A. Korn, J. P. McAdaragh, and C. L. Tondo

The C programming language and a C compiler 37
R. R. Ryan and H. Spiller

Design considerations for IBM Personal Computer Professional FORTRAN, an optimizing compiler 49
M. L. Roberts and P. D. Griffiths

An APL system for the IBM Personal Computer 61
M. L. Tavera, M. Alfonseca, and J. Rojas

Number Two

The IBM large-systems software development process: Objectives and direction 76
W. S. Humphrey

A programming process architecture 79
R. A. Radice, N. K. Roth, A. C. O'Hara, Jr., and W. A. Ciarfella

A programming process study 91
R. A. Radice, J. T. Harding, P. E. Munnis, and R. W. Phillips

Automating the software development process 102
G. F. Hoffnagle and W. E. Beregi

Quality emphasis at IBM's Software Engineering Institute 121
M. B. Carpenter and H. K. Hallman

PDM: A requirements methodology for software system enhancements 134
R. G. Mays, L. S. Orzech, W. A. Ciarfella, and R. W. Phillips

A process-integrated approach to defect prevention 150
C. L. Jones

Programming process productivity measurement system for System/370 168
M. J. Flaherty

Numbers Three and Four

Worldwide systems engineering 182
T. G. Peck

HONE: The IBM marketing support system 189
W. Boos

Performance considerations for a distributed data processing system designed for high availability 200
S. Agassi

Information System Model and Architecture Generator 213
K. P. Hein

A cooperative processing environment with a single-system interface 236
M. M. Ghiotti

Strategies for problem prevention 248
J. Newton

Customer Information Control System—An evolving system facility 264
B. M. Yelavich

An approach to high availability in high-transaction-rate systems 279
R. C. Brooks

The System Planning Grid: A model for building integrated information systems 294
B. R. Buckelew

An information technology architecture for change 307
M. W. Mudie and D. J. Schafer

Cache-DASD storage design for improving system performance 316
C. P. Grossman
